

DROP

Hub & Remote

The Connection to Everything

The DROP Hub is a state-of-the-art smart hub that is the heart and brains of the DROP Connect smart water management system.

Features

- Integrates all of the products in the DROP Water Management System
- Show systems water state
- Extends your mesh network
- Convenient control of water shut off with the touch of a button
- 9V Battery Backup for Power Loss
- DROP App to Control System from Anywhere
- Water Usage Data and History
- Provides text messages, emails and/or push notifications for low salt and other system information to your smartphone.
- 1 Year Warranty

Benefits

Our state-of-the-art smart hub is the heart and brains of the DROP smart water management system. It integrates all your residential water treatment devices such as water softeners and filters, together with pumps, flow meters, valves, leak detectors, and more. Each home requires one Hub and each hub can control 100s of DROP devices. The Hub manages all the DROP devices through DROP Link, a low frequency mesh style radio. The Hub also provides the ability for the system to communicate to the DROP app on your phone or tablet locally or join your local WiFi to enable remote operation. Having only one connection to the local WiFi makes adding devices much simpler than connecting each product directly to the cloud.

The DROP Remote lets you turn on/off your water with a convenient button, notifies you of new system status events, and extends your wireless DROP Link network.

DROP Leak Detectors

Place DROP Leak Detectors under sinks and dishwashers, behind toilets or washing machines, near your water heater, or anywhere that water might leak or collect. If a leak or freezing temperature is detected, the Leak Detector will have the DROP System off your water.
